

User Documentation

Manuale utente: questo documento contiene una breve guida accessibile ad un utente inesperto che spieghi come utilizzare il prodotto realizzato.

Registration/Authentication

The image displays two side-by-side screenshots of the SWENG Notes application interface, illustrating the login and registration processes.

Left Screenshot (Login): The page is titled "SWENG Notes" and features three user avatars: Edoardo Galli, Jean Baptiste Dindane, and Luca Baldini. Below them is a "Sign in to SWENG" section with the text "Welcome back! Please sign in to continue". The form includes a "Username" field with the value "demo" (marked as "Last used") and a "Password" field with the value "password". A "Continue" button is present. At the bottom, it says "Don't have an account? Sign up" and "Secured by clerk Development mode".

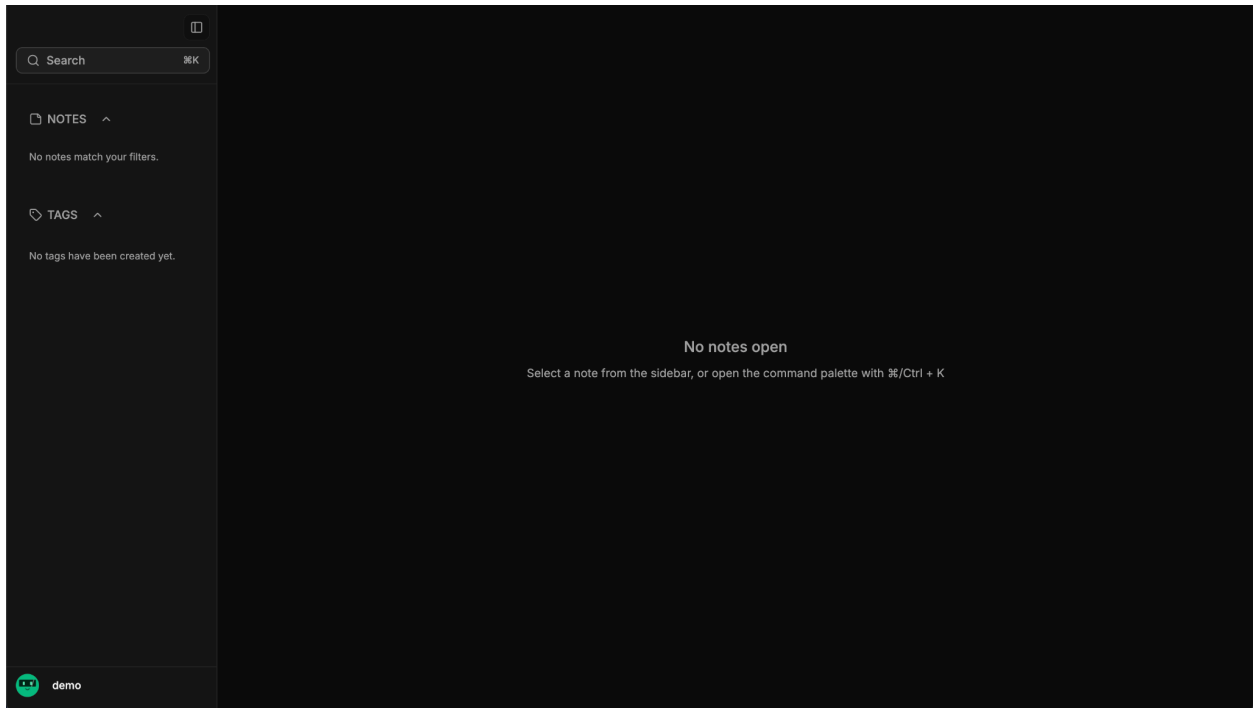

Right Screenshot (Registration): The page is titled "SWENG Notes" and features the same three user avatars. Below them is a "Create your account" section with the text "Welcome! Please fill in the details to get started.". The form includes a "Username" field with the value "demo" and a "Password" field with masked characters "....." (with an eye icon for toggling visibility). A green checkmark indicates "Your password meets all the necessary requirements.". A "Continue" button is present. At the bottom, it says "Already have an account? Sign in" and "Secured by clerk Development mode".

/login

/register

The user can sign in or sign up with a username (unique) and password. Authentication and user session management is handled by Clerk.

Workspace

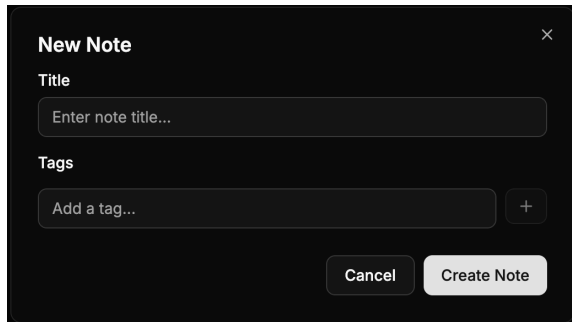

/

Once the user is authenticated, he/she will be redirected to the workspace, which is the single page of the entire platform, all the interactions between the user and the app will happen from here. On the left is the sidebar, which displays all of the user's notes and tags, along with a button to open the **Command Palette** at the top, and the user's profile at the bottom. On the right there's the **Note Editor**, which is where the user can interact with open notes.

Keyboard Shortcuts

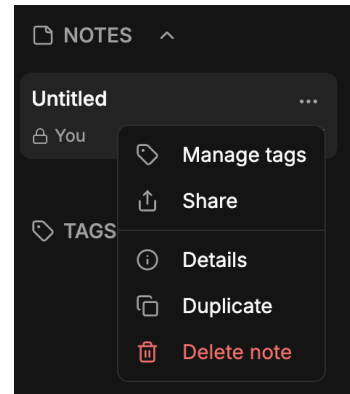

- CTRL + O: Toggle **Sidebar**
- CTRL + K: Toggle **Command Palette**
- CTRL + N: Create new note
- CTRL + P: Toggle profile

Sidebar

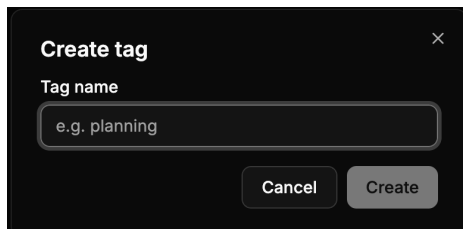

A modal form titled "New Note" with a close button (X) in the top right corner. It contains a "Title" section with a text input field labeled "Enter note title...". Below this is a "Tags" section with a text input field labeled "Add a tag..." and a plus sign button. At the bottom, there are two buttons: "Cancel" and "Create Note".

/?action=new-note

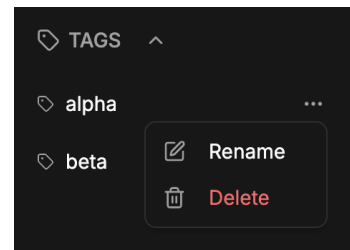

A sidebar menu titled "NOTES" with a dropdown arrow. It lists "Untitled" and "You" under the "NOTES" section. Below this is a "TAGS" section. A context menu is open for the "Untitled" note, showing options: "Manage tags", "Share", "Details", "Duplicate", and "Delete note" (highlighted in red).

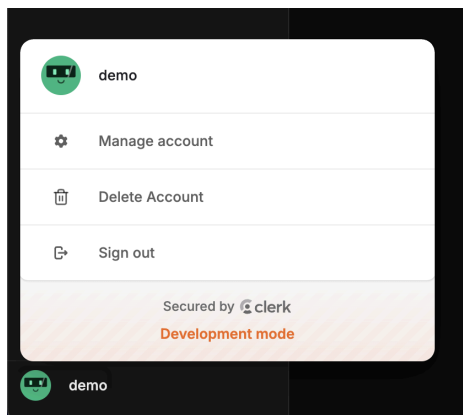

A modal form titled "Create tag" with a close button (X) in the top right corner. It contains a "Tag name" section with a text input field containing "e.g. planning". At the bottom, there are two buttons: "Cancel" and "Create".

/?action=new-tag

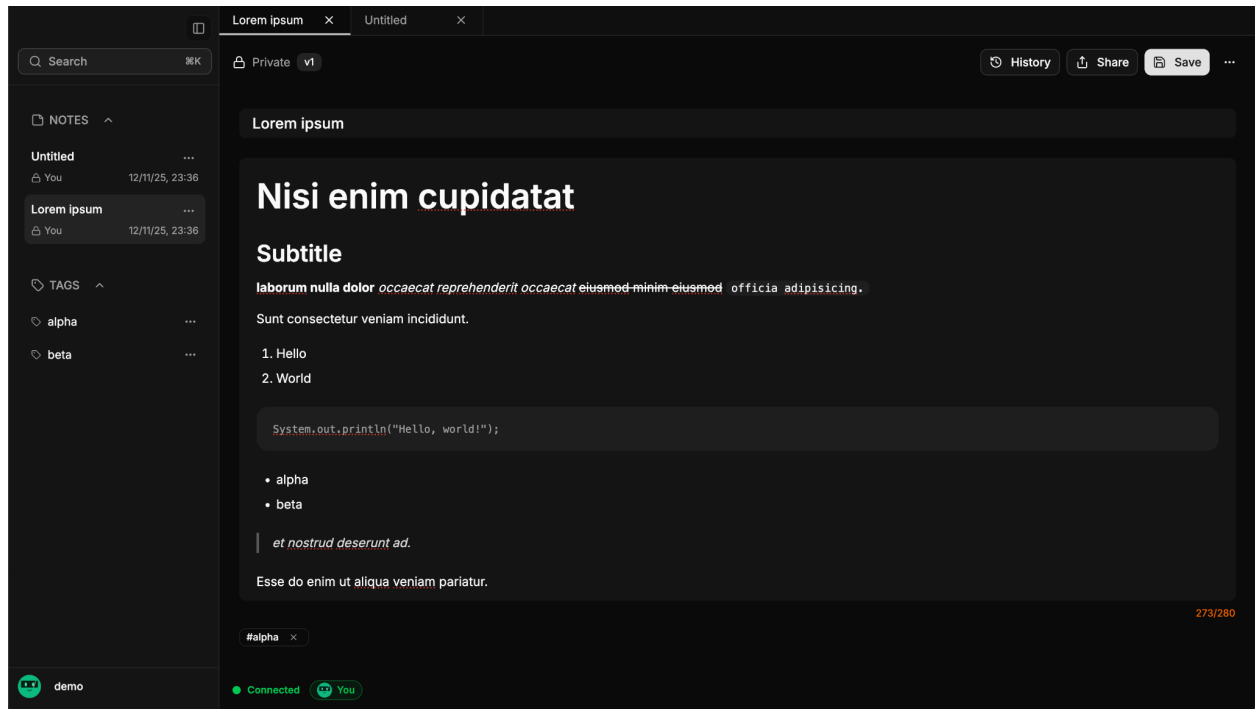

A sidebar menu titled "TAGS" with a dropdown arrow. It lists "alpha" and "beta" under the "TAGS" section. A context menu is open for the "alpha" tag, showing options: "Rename" and "Delete" (highlighted in red).

A modal form showing a user profile for "demo". It includes a profile picture, a "demo" name, and a list of actions: "Manage account", "Delete Account", and "Sign out". At the bottom, it says "Secured by clerk" and "Development mode".

Interacting with the **Sidebar**, the user can create a new note or tag, interact with all his/her notes/tags (including shared ones), and manage his/her profile. Within the profile dialog, the user can also **delete** his/her **account**, which in turn deletes all their notes, tags, and access to shared notes.

Note Editor

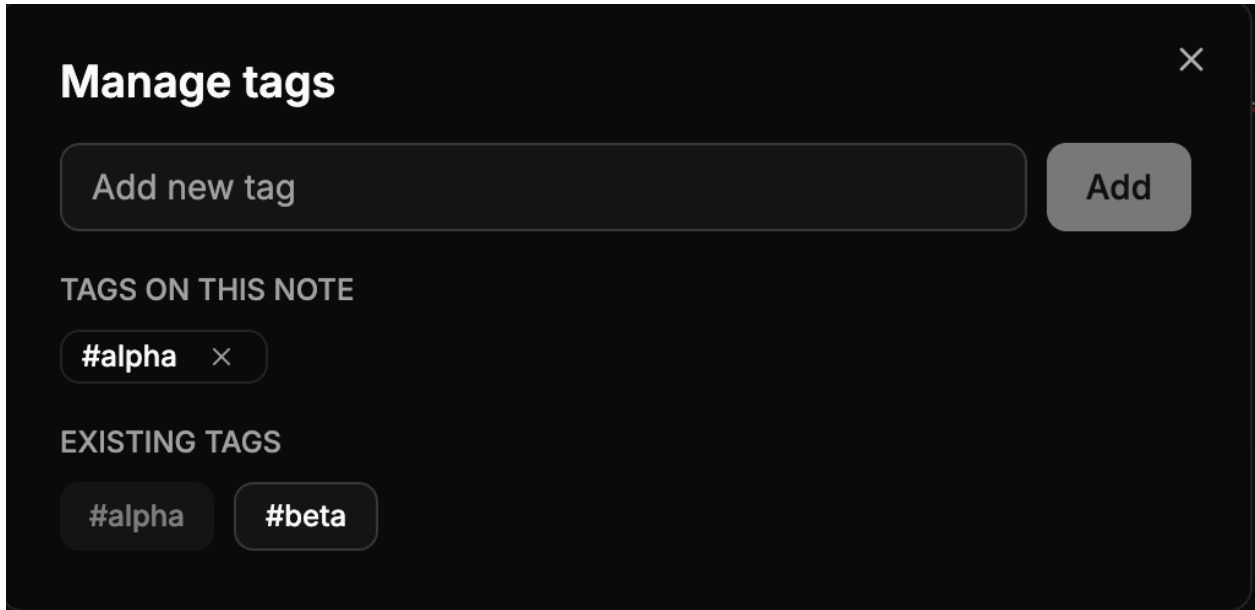

`/?note={note_id}`

Once the user has created and opened a note, he/she can interact with the **Note Editor** and begin editing the note and its properties, which includes the note's title (32 char limit), and contents (280 char limit).

At the top right corner of the **Note Editor** the owner of the note, by pressing on the relevant buttons, can view the **Version History** of the note, share the note to other users (**Collaborator Management**), or create a snapshot (version) of the note. In the center of the **Note Editor** the user can edit the title and the text of the note. At the bottom left corner of the **Note Editor** the user can see all the tags associated and eventually delete them. Lastly, there's a list of all the users currently connected to the note, which updates in real time.

Tag Management

A dark-themed dialog box titled "Manage tags" with a close button (X) in the top right corner. It features a text input field with the placeholder "Add new tag" and an "Add" button to its right. Below this, the section "TAGS ON THIS NOTE" displays a single tag "#alpha" with a close icon (X). The section "EXISTING TAGS" shows two tags: "#alpha" and "#beta".

Manage tags ×

Add new tag Add

#alpha ×

EXISTING TAGS

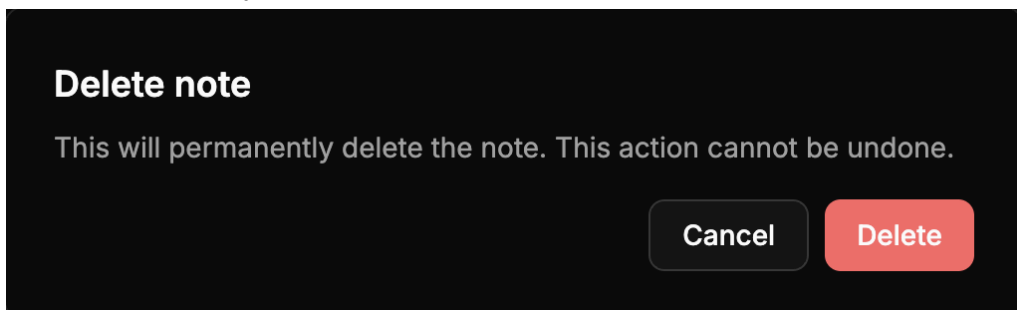

#alpha #beta

`/?note={note_id}&dialog=tags`

The owner of a note can manage the tags that are associated with it through this dialog, in which he/she can either insert a new tag to the note (thus also creating that tag globally for his/her account), or attach/remove an existing tag from the note.

Note Management

- (Owner-only) Delete the note

A dark-themed dialog box titled "Delete note". It contains a warning message: "This will permanently delete the note. This action cannot be undone." At the bottom, there are two buttons: "Cancel" and "Delete".

Delete note

This will permanently delete the note. This action cannot be undone.

Version History

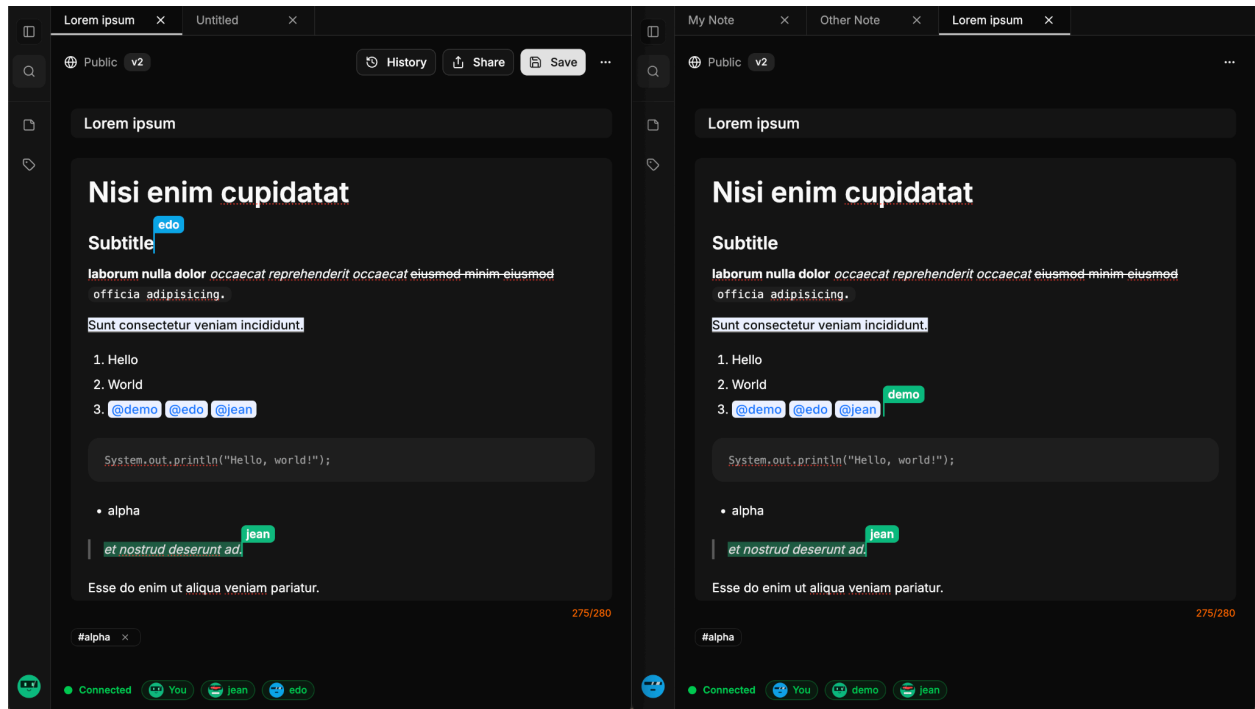

/?note={note_id}&dialog=versionHistory

This dialog allows a user to navigate through all the versions of the note which he/she has saved, and restore the note back to a specific version of it. The restoring functionality works both forwards and backwards (e.g. 3 versions exist, but the owner can be working on v2, and then save his/her work, which sets the note to v4).

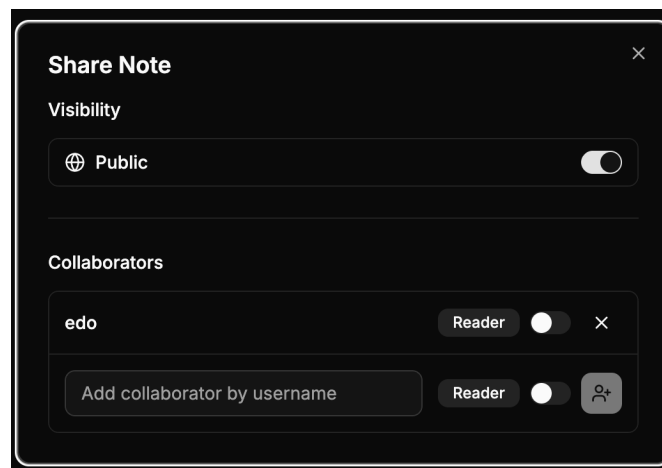

The dialog will always open on the current version of the note, and the owner is free to scroll between the previews of all versions by either pressing on the arrow buttons on the screen, or using the arrow keys on the keyboard.

The snapshot of each version of a note preserves the Markdown syntax used to style the contents of it, and is guaranteed to work even if the user consumes all 280 available characters for a note.

Collaborator Management

The application has been designed from the ground-up with real-time collaborative experiences as the focal point. It supports up to 10 real-time collaborators per note, cursor presence & tracking, including visual selection of text. Collaborators can also mention each other in a note using @user syntax.

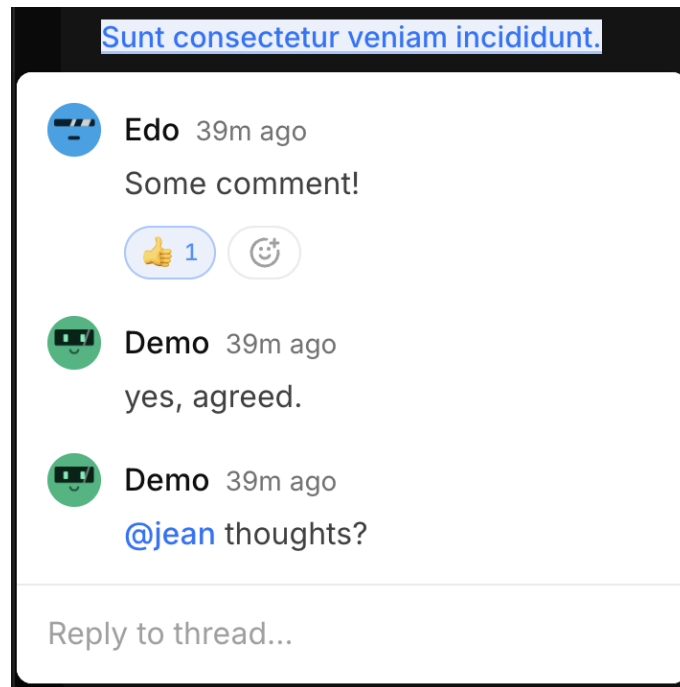

/?note={note_id}&dialog=share

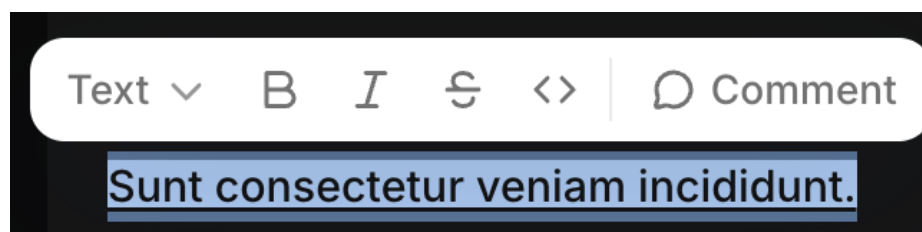

The owner can set the visibility of the note either to **public** or **private** (default). Adding collaborators automatically toggles the note visibility to **public**, and setting the visibility back to **private** will also automatically remove all collaborators to whom the owner has shared the note

to. The owner can add multiple collaborators to a note, granting each of them **reader** or **writer** permission. At any point, the owner can toggle any collaborator's read-write permission, and the result is effective immediately. Similarly, when the owner removes a collaborator from the note, the collaborator loses access to it immediately.

Collaborator Threads

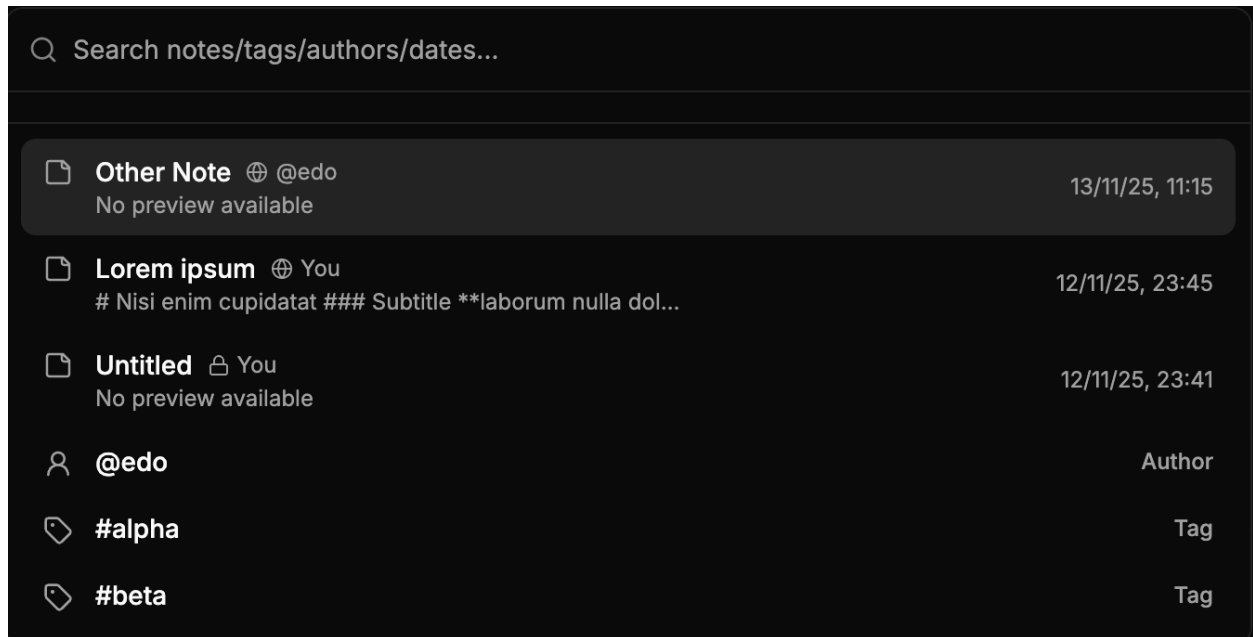

Collaborators of a note can also interact with one another within the same context, by visually selecting portions of the note's content and clicking on the "Comment" button from the tooltip that appears above the selected text:

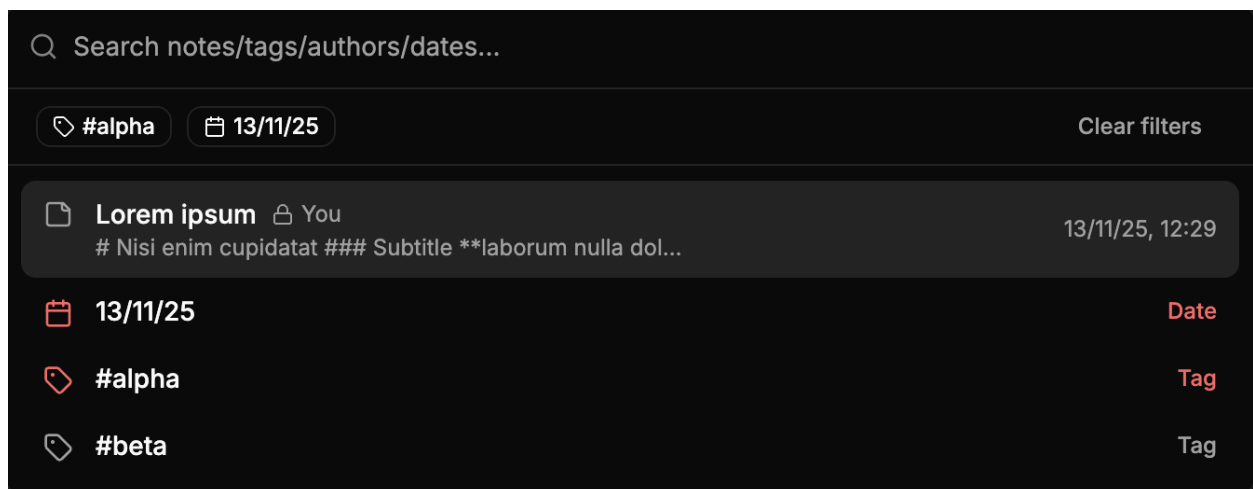

The other buttons are purely for Markdown styling.

Command Palette

The **command palette**, triggerable either via the Ctrl+K hotkey or by pressing on the search button atop of the **Sidebar**, allows a user to search for a note by its **title** and **content**, or also by applying one or more of the following filters: **tags**, **authors**, and **date** (specifying optionally by creation or modification date). It is the primary and recommended way to navigate between notes on the platform.

Date filtering is done using natural language for queries. For instance, writing “today” on the command palette will prompt the user to apply a date filter corresponding to today (including both creation and modification of notes), which can optionally be narrowed down to either creation or modification date by prefixing the query with “created” or “modified”, respectively.

This is what the command palette looks with a date and tag filter applied.
